

Step-1

--> Create New Project
--> select Java With Ant > Java Web
--> Select Web Application
--> Name the Project
--> Add Server Tomcat (Add > Apache Tomcat or TomEE)
--> Server Location Browse (This Pc > Local Disk(C) > Program Files > Apache Software > Tomcat 10.1 > Username= admin > Password =Password

Step-2

--> Index.html create already once you done the step for project above
--> Write code in index.html

[Code]

```
<!DOCTYPE html>
<html>
<head>
<meta charset="ISO-8859-1">
<title>Servlet Login Example</title>
</head>
<body>

<h1>Login App using HttpSession</h1>
<a href="login.html">Login</a>|
<a href="LogoutServlet">Logout</a>|
<a href="ProfileServlet">Profile</a>

</body>
</html>
```

Step-3

--> Create a Login.html page (Go to the project window > Right click on Project Name > New > html page > name (login))
--> Write code in login.html

[Code]

```
<form action="LoginServlet" method="post">
Name:<input type="text" name="name"><br>
Password:<input type="password" name="password"><br>
<input type="submit" value="login">
</form>
```

Step-4

Again same step follow as done for (login.html). Create file link.html

--> Create a link.html page (Go to the project window > Right click on Project Name > New > select new html > name (link))

--> Write code in link.html

[Code]

```
<a href="login.html">Login</a> |
<a href="LogoutServlet">Logout</a> |
<a href="ProfileServlet">Profile</a>
<hr>
```

Step-5

--> Create a LoginServlet (Go to the project window > Right click on Source Package > new > Servlet > Give name (LoginServlet) > Next > Tick the Checkbox (Add information to deployment descriptor) > Finish)

--> Write code in LoginServlet

[Code]

```
import java.io.IOException;
import java.io.PrintWriter;

import jakarta.servlet.ServletException;
import jakarta.servlet.http.HttpServlet;
import jakarta.servlet.http.HttpServletRequest;
import jakarta.servlet.http.HttpServletResponse;
```

```

import jakarta.servlet.http.HttpSession;
public class LoginServlet extends HttpServlet {
    protected void doPost(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html");
        PrintWriter out=response.getWriter();
        request.getRequestDispatcher("link.html").include(request, response);

        String name=request.getParameter("name");
        String password=request.getParameter("password");

        if(password.equals("admin123")){
            out.print("Welcome, "+name);
            HttpSession session=request.getSession();
            session.setAttribute("name",name);
        }
        else{
            out.print("Sorry, username or password error!");
            request.getRequestDispatcher("login.html").include(request, response);
        }
        out.close();
    }
}

```

Step-6

Again same step as (LoginServlet)

--> Create a LogoutServlet (Go to the project window > Right click on Source Package > new > Servlet > Give name (LogoutServlet) > Next > Tick the Checkbox (Add information to deployment descriptor) > Finish)
 --> Write code in LogoutServlet

[code]

```

import java.io.IOException;
import java.io.PrintWriter;

import jakarta.servlet.ServletException;
import jakarta.servlet.http.HttpServlet;
import jakarta.servlet.http.HttpServletRequest;
import jakarta.servlet.http.HttpServletResponse;

```

```

import jakarta.servlet.http.HttpSession;
public class LogoutServlet extends HttpServlet {
    protected void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html");
        PrintWriter out=response.getWriter();

        request.getRequestDispatcher("link.html").include(request, response);

        HttpSession session=request.getSession();
        session.invalidate();

        out.print("You are successfully logged out!");

        out.close();
    }
}

```

Step-7

Again same step as (LoginServlet)

--> Create a ProfileServlet (Go to the project window > Right click on Source Package > new > Servlet > Give name (ProfileServlet) > Next > Tick the Checkbox (Add information to deployment descriptor) > Finish)
 --> Write code in ProfileServlet

[Code]

```

import java.io.IOException;
import java.io.PrintWriter;
import jakarta.servlet.ServletException;
import jakarta.servlet.http.HttpServlet;
import jakarta.servlet.http.HttpServletRequest;
import jakarta.servlet.http.HttpServletResponse;
import jakarta.servlet.http.HttpSession;
public class ProfileServlet extends HttpServlet {
    protected void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {
        response.setContentType("text/html");
        PrintWriter out=response.getWriter();

```

```
request.getRequestDispatcher("link.html").include(request, response);

HttpSession session=request.getSession(false);
if(session!=null){
String name=(String)session.getAttribute("name");

out.print("Hello, "+name+" Welcome to Profile");
}
else{
    out.print("Please login first");
    request.getRequestDispatcher("login.html").include(request, response);
}
out.close();
}
}
```

Step-8

--> Run the Program of LoginServlet
