

### Step-1

--> Create a table in mysql

#### Code

```
CREATE database test;
```

```
USE test;
```

```
CREATE TABLE Players(  
    ID INT,  
    First_Name VARCHAR(255),  
    Last_Name VARCHAR(255),  
    Date_Of_Birth date,  
    Place_Of_Birth VARCHAR(255),  
    Country VARCHAR(255),  
    PRIMARY KEY (ID)  
);
```

```
insert into Players values(1, 'Shikhar', 'Dhawan', DATE('1981-12-05'), 'Delhi', 'India');  
insert into Players values(2, 'Jonathan', 'Trott', DATE('1981-04-22'), 'CapeTown', 'SouthAfrica');  
insert into Players values(3, 'Kumara', 'Sangakkara', DATE('1977-10-27'), 'Matale', 'Srilanka');  
insert into Players values(4, 'Virat', 'Kohli', DATE('1988-11-05'), 'Delhi', 'India');  
insert into Players values(5, 'Rohit', 'Sharma', DATE('1987-04-30'), 'Nagpur', 'India');  
insert into Players values(6, 'Ravindra', 'Jadeja', DATE('1988-12-06'), 'Nagpur', 'India');  
insert into Players values(7, 'James', 'Anderson', DATE('1982-06-30'), 'Burnley', 'England');  
select * from Players;
```

### Step-2

--> In netbeans create a project > JAVA with ant > java Application > Next > Project name > finish

### Step-3

--> Write the code for JDBC

#### Code:

```
package jdbc;  
  
import java.sql.Connection;  
import java.sql.Date;  
import java.sql.DriverManager;  
import java.sql.PreparedStatement;  
import java.sql.ResultSet;
```

```

import java.sql.SQLException;
import java.sql.Statement;
public class JDBC {
    public static void main(String args[]) throws SQLException {
        //Registering the Driver
        //DriverManager.registerDriver(new com.mysql.jdbc.Driver());
        // DriverManager.registerDriver(new com.mysql.jdbc.Driver());
        //Getting the connection
        String mysqlUrl = "jdbc:mysql://localhost:3306/testdb1";
        Connection con = DriverManager.getConnection(mysqlUrl, "root", "Password");
        System.out.println("Connection established.....");
        //Creating the Statement
        Statement stmt = con.createStatement();
        //Insert a row into the MyPlayers table
        PreparedStatement pstmt = con.prepareStatement("INSERT INTO MyPlayers values (?, ?,
?, ?, ?, ?)");
        pstmt.setInt(1, 9);
        pstmt.setString(2, "R");
        pstmt.setString(3, "Mc");
        pstmt.setDate(4, new Date(513596800000L));
        pstmt.setString(5, "Ku");
        pstmt.setNull(6, java.sql.Types.VARCHAR);
        pstmt.executeUpdate();
        //Query to retrieve records
        String query = "Select * from MyPlayers";
        //Executing the query
        ResultSet rs = stmt.executeQuery(query);
        //Verifying whether last row read was null
        while(rs.next()) {
            int id = rs.getInt("ID");
            String first_name = rs.getString("First_Name");
            String last_name = rs.getString("Last_Name");
            Date date_of_birth = rs.getDate("Date_Of_Birth");
            String place_of_birth = rs.getString("Place_Of_Birth");
            String country = rs.getString("Country");
            boolean bool = rs.wasNull();
            if(bool) {
                System.out.print("Id: "+id+", ");
                System.out.print("First Name: "+first_name+", ");
                System.out.print("Last Name: "+last_name+", ");
                System.out.print("Date Of Birth: "+date_of_birth+", ");
                System.out.print("Place Of Birth: "+place_of_birth+", ");
                System.out.print("Country: "+country);
                System.out.println(" ");
            }
        }
    }
}

```

```
}  
}  
}  
}
```

#### Step-4

--> Check weather 1) Database name is same as MYSQL  
2) Root password is same  
3) Table name And attributes of coloum is same

#### Step-5

--> And go to thr project window > right click on project name> go to libraries > and add path of jar file of Mysql connector.

#### Step-6

--> Then Run the program of netbeans

#### Step-7

--> After executing the netbeans program > go to the my MYSQL > Write command ( Select \* from Myplayers) > And run it.

one more line is add in table of my sql
