

Experiment no-3

Steps:

1. Create new project.
2. Click on File > New Project
3. Click on Java with Maven > Java Application
4. Give project name > Click on Finish

Now to create JFrame box

1. Click on Projects(left hand side present)>Go to the project(created with the name)> click on source package
2. Right click on source package > click on new > JFrame Form
3. Give name to the JFrame form > Click on Finish

Now go on design tab

1. Select Panel(adjust according to your window size)
2. Click on label > paste on panel > right click on it > edit text > Student name
3. Click on label > paste on panel > right click on it > edit text > Maths
4. Click on label > paste on panel > right click on it > edit text > Science
5. Click on label > paste on panel > right click on it > edit text > English

Now from Swing Control

1. Select textfield > paste it near to the student name(to enter the name) > right click on box > Click on change variable name > enter(txtName)
2. Select textfield > paste it near to the maths > right click on box > Click on change variable name > enter(txtMaths)
3. Select textfield > paste it near to the science > right click on box > Click on change variable name > enter(txtSci)
4. Select textfield > paste it near to the english > right click on box > Click on change variable name > enter(txtEng)

Now again select panel to calculate total, avg and grade

1. Follow the same steps as the above steps select label > paste on panel > right click on it > edit text > Total

Same do for average and grade

2. Now select textfield > paste it near to total > right click on the box > Click on change variable name > enter(lbltot)

Same do near avg and grade

Now select button

edit text > enter(Calc)

double click on Calc

wirte code for Calc :

```

double maths,science,english,tot,avg;
String grade;
maths = Integer.parseInt(txtMaths.getText());
science = Integer.parseInt(txtSci.getText());
english = Integer.parseInt(txtEng.getText());

tot = maths + science + english;

avg = tot/3;

if(avg>=85)
{
    grade = "A";
}
else if(avg>=75)
{
    grade = "B";
}
else if(avg>=65)
{
    grade = "C";
}
else if(avg>=45)
{
    grade = "S";
}
else
{
    grade = "F";
}

lbltot.setText(String.valueOf(tot));
lblAvg.setText(String.valueOf(avg));
lblGrade.setText(grade);

```

Save the file

How to run the code

Right click near the code > Click on Run File or Press Shift + F6s
